

SOCIAL DATA HELPING SCIENTISTS

Levels 7-8

These series of lessons were created in collaboration with the Digital Technologies Specialist Teacher at Peace Lutheran College, Cairns, Queensland

Unit Overview

Marine Scientists have looked towards social media to assist in the data collection of marine life. This unit investigates using social media as a tool to acquire data. Students will develop their skills in spreadsheet programs which will help them to collate and analyse the data that has been extracted from social media. After their hands-on experience of collecting, collating and analysing data, students will design a social media platform that is specifically for data collection on marine likes. These designs will consider the type of data that would be appropriate for scientists to continue their research into marine life.

Other Curriculum Targeted Areas

Other curriculum areas can be targeted and assessed within this unit.

Other areas of interest may include:

- Science
- Design and Technology

Further investigation into these areas is required to ensure they align with the following activities. Activities may need to be modified to ensure content descriptions and achievement standards are met.

Australian Curriculum Alignment

The following sessions have been created using the Australian Curriculum: Digital Technologies Curriculum. Tasks may need to be modified to ensure state Digital Technologies Curriculum content descriptions and achievement standards are met. ACS has support and documents to help align this unit to other Digital Technology Curricular.

Session

'Session' has been used to define the order of tasks to complete the unit. It does not define a set time required to complete the task. Time allocated to complete a session is the teacher's discretion. This allows for flexibility for the teacher to drive the duration of the task and make modifications if necessary. Sessions can be merged into one set period or one session may run over multiple periods.

SOCIAL DATA HELPING SCIENTISTS

Levels 7-8

Key Preparation

Students will need to access to a software program that will help them analyse and interpret data. A common software program to collate and interpret data is spreadsheets. Programs such as Microsoft Excel, Google Sheets and Apple Number all contain the capacity to manipulate and present data. [GCFLearnfree.Org](https://www.gcflearnfree.org) has a plethora of videos to support knowledge development to use spreadsheet software. It should be noted that other spreadsheet software (such as Google Sheets, Apple's Sheets and) use a similar layout to Microsoft Excel and these videos can be adapted to suit your needs.

The design of their new social media platform is completed unplugged. Students will not be creating a digital prototype of their digital solution.

ACS Resources

Resources have been created to help teachers and students unpack and understand topics found within the Digital Technologies Curriculum. These give brief explanations of the topic and the expectations to teach the topic at the curriculum year level. It is intended the information is presented in a way that will set the foundation for further research.

Key Understandings

Students will:

- Define social media and social data and explain how social media is a tool to acquire data.
- Evaluate Social media apps and platforms for their use to collect social data.
- Develop skills in using spreadsheet software programs to analyse and visual data.
- Design and evaluate a new social media digital platform with the intention to support scientists to collect

Key Questions

- What social apps and platforms do you know and use and what is their prime function?
- How can social media support the wider community?
- How are scientists using social media to gather more data about marine life?
- How is data collected and analyzed?
- How can you use spreadsheets to collect and analyse social media data?
- If you could create a social media platform to help marine life what would it look like?
- What type of data would need to be included to help scientists?

Key Vocabulary

Collaboration, protocols (ethical, social and technical protocols), social media, data collection, social data, analysing data, digital solutions, user experience functional requirements, student solutions, digital systems meeting needs, innovative ideas

SOCIAL DATA HELPING SCIENTISTS

Levels 7-8

Session Number	Session Topic Focus	Learning Intention and Success Criteria	Introduction/Teacher Instruction	Whole Class Activity
1.	Online collaboration	<p>Learning Intention Students will generate and adhere to protocols when working in online spaces.</p> <p>Success Criteria I can create a guideline that I will abide by when using digital technology to work on my app.</p>	Introduce students to a digital collaborative space. Discuss the right and wrong way to use this space.	In small groups, students create a set of guidelines when working in a group in collaborative environments.
Session Resources	<ul style="list-style-type: none"> • ACS Teacher Resource: Online Collaboration • ACS Student Resource: Online Protocols 			
2.	Social Media	<p>Learning Intention Students will define the term social media and explain the purpose of common social media platforms.</p> <p>Success Criteria I can identify and explain common social media platforms.</p>	Together identify a range of common social media platforms that are used by the students. Discuss as a class the purpose of social media.	<p>In a group, discuss the term 'social media'. Students write down what makes the platforms grouped as social media.</p> <p>Students will identify and explain common social media platforms. They will create a definition of social media. They will focus on answering a set of questions to assisting in evaluating and analysing a selection of platforms.</p>

Levels 7-8

Social Media Deep Dive Evaluation	
Title	What's the title of the social media platform?
Use	What is it used for? Such as content sharing, entertainment, gaming, live streaming
Short Description	Write a short summary of the platform and describe how a user interacts with the platform. Do users have the capacity to upload/download files? What's the key feature of the platform? Describe a common/main screen.
Stats	How many users does it have? How many uploads occur each day, month or year? What are the costs to the user? Are there – monthly subscriptions, one off payments, purchases.
Functional Requirements	What are the functional requirements (what are the must haves of the platform) to make it work?
User Experience and Usability	What is your experience of using the platform? When examining the interface of the platform is there anything that looks out of place? Or should be moved to another area? Or functions (such as buttons) that get in the way of users having a positive experience? Does it have any glitches, freeze or random shut downs, broken links? To find out this information, look at reviews and ratings.
Personal opinions	Have you used or access this platform before? If so – rate it out of 10. Explain your rating If you could change something about the platform (being free not an option) what would you change?

SOCIAL DATA HELPING SCIENTISTS

Levels 7-8

Social Media Evaluation	
Title	What's the title of the social media platform?
Use	What is it commonly used for? Such as content sharing, entertainment, gaming, live streaming.
Short Description	Write a short summary of the platform and describe how a user interacts with the platform.
Data Collection	What data is collected? How is this benefiting the scientists? How was the data collected? Do they tell you what they were looking for and any key words they were searching for? Create a list of advantages and disadvantages for using social media to support data collection on marine life. How can it benefit the wider community?
Functional Requirements	What are the functional requirements (what are the must haves of the platform) to make it work? How are they using these requirements to gather data?
Meeting Needs	What need is the technology meeting? Why would this be important?
Innovative	How is this technology contributing to marine sustainability?
Sustainability	What social objective is it trying to achieve? How successful do you think that is?
Personal opinion	What rating would you give to use social media this way? Do you think it will be effective?

Functional Requirements	What are the functional requirements (what are the must haves of the platform) to make it work? How are they using these requirements to gather data?
Meeting Needs	What need is the technology meeting? Why would this be important?
Innovative	How is this technology contributing to marine sustainability?
Sustainability	What social objective is it trying to achieve?
Person reflection	If you were to design this again, what would you do differently? What is one thing that you liked about your design? What is one thing you would change? Would there be anything you'd like to add? What makes this app innovative? Could you see any limitations when using the platform? What makes this different to other platforms that already exist?

SOCIAL DATA HELPING SCIENTISTS

Levels 7-8

Assessment – Australian Digital Technologies Curriculum			
Content Description	Session Number	Assessment Piece	Assessment Statement
Investigate how data is transmitted and secured in wired, wireless and mobile networks, and how the specifications affect performance (ACTDIK023)	N/A		
Investigate how digital systems represent text, image and audio data in binary (ACTDIK024)	9	Explanation of the representation text images and audio	Students explained how text images and audio is represented in binary within digital solutions.
Acquire data from a range of sources and evaluate authenticity, accuracy and timeliness (ACTDIP025)	4, 5 & 6	Acquisition of data	Students evaluated the data that was collected through social media platforms.
Analyse and visualise data using a range of software to create information, and use structured data to model objects or events (ACTDIP026)	4, 5 & 6	Activities to increase skill level in spreadsheet programs. Data analysis and presentation of dataset	Students completed a selection of activities to demonstrate their understanding of a software program, students analysed and presented information on a dataset.
Define and decompose real-world problems taking into account functional requirements and economic, environmental, social, technical and usability constraints (ACTDIP027)	3 & 7	Evaluation of platforms to support marine sustainability	Students
Design the user experience of a digital system, generating, evaluating and communicating alternative designs (ACTDIP028)	8	Design of a social media platform to support marine sustainability	Students
Design algorithms represented diagrammatically and in English, and trace algorithms to predict output for a given input and to identify errors (ACTDIP029)	N/A		
Implement and modify programs with user interfaces involving branching, iteration and functions in a general-purpose programming language (ACTDIP030)	N/A		
Evaluate how student solutions and existing information systems meet needs, are innovative, and take account of future risks and sustainability (ACTDIP031)	3 & 9	Evaluating of current social media platform exiting and student designed	Students evaluated digital solutions (existing and their own designs) that were created to support the sustainability and conservation of marine animals.
Plan and manage projects that create and communicate ideas and information collaboratively online, taking safety and social contexts into account (ACTDIP032)	1	Examples of students working collaboratively throughout the unit	Students used an online platform to organise, communicate ideas to complete a project that examined the collection and analysis of data.
