- Sustainability engineering
- Sustainability management for IT
- Sustainability strategy
- System software
- Systems design
- Systems development management
- Systems installation/decommissioning
- Systems integration
- Teaching and subject formation
- Technical specialism
- Technology audit
- Testing
- User experience analysis
- User experience evaluation

Pathway Accelerators reducing experience requirements:

For all pathways with the exception of Senior Manager and Academic: Completion of the CPeP program will reduce the experience requirement by 1.5 years

Completion of an Advanced Masters' degree may reduce the experience requirement by up to 2 years [Note: the total reduction from CPeP plus Advanced Masters is 2 years]

Work integrated learning (WIL) - Where the work-based learning extends the study period beyond the normal three year program, the WIL component may be counted towards the experience requirements for ACS professional certification.

Honours - The honours year may be counted towards the experience requirements for ACS professional certification, provided an Honours degree in ICT is awarded in an area relevant to the SFIA level 5 specialism(s) of the applicant.
